Recycle Me?

Ask yourself, right now if you are the type of person who thinks of recycling as work? Well if you thought so, you can stop now. "I mean thinking," just joking :).

Recycling does take work and it has become part of our social lives.

What else is part of our lives and our communities?

1. Farms, grocery stores, and restaurants
2. Cars, trains, and planes
3. Home, work, and vacation

To be clear there might be an infinite list of possibilities that can be a part of a person's social life.

What does this have to do with science?

Well as the title states what if we recycled ourselves? I mean we get down to the little details that we ignore and ask ourselves, how can we recycle that "kinetic" energy that grew into being from the "dynamics" of social life"?

So here it is, Kippik Technology has put up a website and we officially have set timetables to answer the above question. Which was;

"How can we recycle the energy used from the dynamics of social life?"

For more information and updates checkout our webpage:
